

# HOW IT WORKS

The World Park's trails link together many of the world's existing protected areas in biodiversity hotspots (regions where irreplaceable species are threatened with extinction). With campsites every 20 kilometers, the trails provide recreational access to these landscapes and also serve as catalysts for ecological restoration projects along the entire route.

-  **PROTECTED AREA**
-  **NEW TRAIL**
-  **WPP RESTORATION**
-  **NEW CAMPSITE**
